Company Profile

Unipro Software Pte Ltd is a home grown software company and has been providing software services and system integration services to organizations of many sizes. As a company with in-house software developers, we combine the latest development tools with ever-changing technology to provide quality software development services that meet the demands of industry trends and we also deliver beyond.

We provide solutions for a dynamic environment where business and technology strategies converge. Our approach focuses on new ways of business combining IT innovation and adoption while also leveraging an organization's current IT assets.

Our experience and specialization in different industries position us as a competent and an efficient software development firm with unsurpassed distinction that is geared towards building synergy with our clients business.

Our goal unlike other software firms does not end with the system implementation. In addition we provide a strong backup and support to our clients in hope that would eventually build a long lasting relationship.

We are also one of the certified e-business standard implementer for supermarket chains in Singapore. With an intelligent B2B solution from UNIPRO it's easier than ever to meet the intense demands of the Retail / FMG industry.

Why Our Software ?

Integrated Information

Retail POS which is built based on client-server architecture and run on Windows platform, provides connectivity feature which enable the connectivity between multiple outlets. The interconnectivity allows user to retrieve accurate and integrated information in at any point of time.

(PO), print Delivery Order (DO), check stock level and many more from a PDA.

Sales Analysis

Retail POS enables you to do a thorough sales performance analysis. Users can easily opt to do a sales analysis daily, weekly, monthly, or quarterly, and yearly. Or do analysis based on which items sell best and which items are not achieving sales target.

Remote Inventory Management

Retail POS provide feature for remote inventory management, namely PDA Module. This feature allows user to do a stock take, create Purchase Order

One-Stop Solution

Retail POS provides integration with Inventory Management System. Easily used to Print Barcode labels, profit reports, inventory control, sales history, purchases analysis, and many more.

Major Benefit

Features	Benefit
Connectivity	Integrity. Connects HQ with multiple outlets.
Stock Level View	Prevent Under/Over Stocking.
Level of Security	Gain control over store operation and reduce theft. Prevent unauthorized personnel to view or change certain information.
Update Price	Time efficiency. Update price for all outlets from HQ or from Outlet itself without any hassle.
Stock Transfer / Stock Request	Save Time and Effort. Outlets can send in their stock request to HQ via the system. HQ may view all stock requests via the system and transfer stocks to the outlet. All of these are recorded within the system.
Customer History	Improve Customer Relationship. The best customers you have are people who have already shopped with you. Keeping in touch with them are a great way to increase sales. Use customer buying history to do targeted advertising or incentive program.
Purchase Return / Sales Return	Reduce paperwork. Allow you to record purchase return / sales return. Ex : System will automatically deduct the item from your stock if you are doing purchase return to your supplier.
Credit Terms	Flexibility. Record NOT ONLY cash sales but also credit sales. The system is capable of recording cash sales and credit sales.
Automated PO	Improved Efficiency. Create PO from the system. Send the PO to your supplier, and upon receiving goods, use the Delivery Order in the system to record which goods have been delivered and which are still pending.
Sales Performance Analysis Report / Graph	Comprehensive Analysis. Detailed sales reports help you increase sale and forecast future business needs. E.g. Promoting slow-mover product can help boost its sales

System Modules

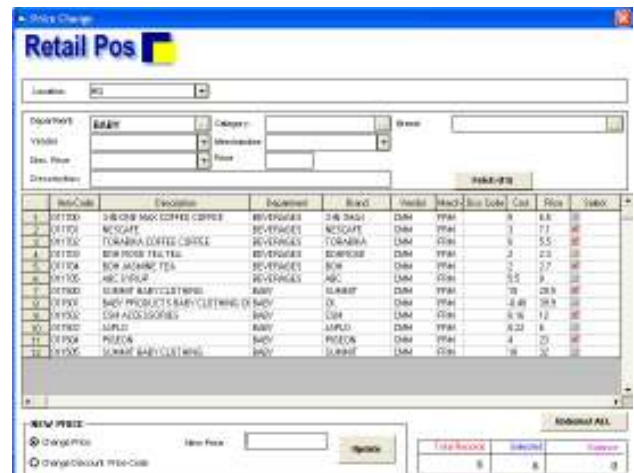

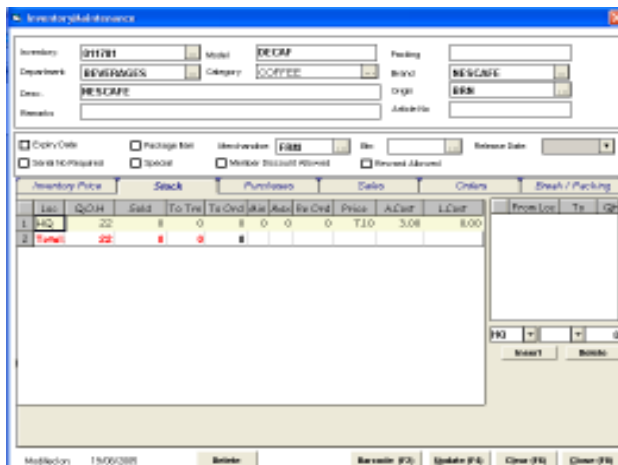

Inventory Module

Retail POS Inventory Module allows users to classify their inventory into different groups namely Department, Category and Brand.

An inventory module also allows users to print their own barcode accordingly to the inventory number which is auto-generated by the system.

Each inventory will hold information such as Average Cost, Selling Price, Stock Level, Purchases, Pending Stock Delivery, Promotional Price, Brand, Supplier, and many more.

Users also have the flexibility to update the price of an item from the HQ or from outlet itself. To update the price for some of your items, you can do it in Update Price Screen whereby you can update prices for various items at the same time. This will reduce hassle in maintaining prices when promotional season is ahead.

Retail POS

Purchase Module

Retail POS Purchase Module allows user to track any purchases they have made from suppliers. Stock will automatically be added accordingly to the purchased goods quantity.

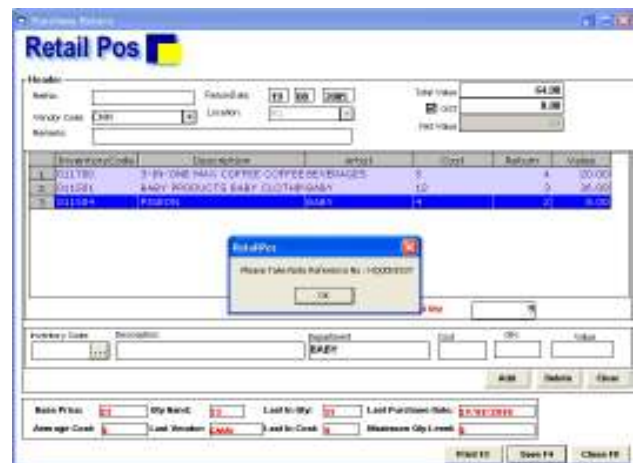

The module consists of **Purchase Order (PO)** feature, **Delivery Order (DO)**, **Purchase Invoice Entry**, and **Purchase Return**.

How can user be benefited from this module?
"Create PO from the system. Send the PO to your supplier, and upon receiving goods, use the Delivery Order in the system to track which goods has been delivered and which is still pending."

The whole process of purchasing goods and having them delivered have been recorded and will allow user to reduce worries in checking whether the ordered stock has been delivered.

When the goods received from the supplier are damaged, user can perform Purchase Return in the Retail POS system the stock accordingly to the amount that have been returned to the supplier.

Transfer Module

Transfer Module allows user to track the transfer of goods from Headquarter (HQ) to Outlet, Outlet to Outlet and Outlet to Headquarter.

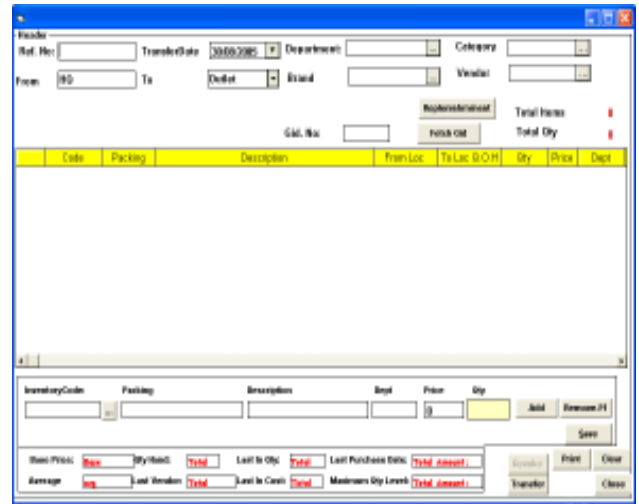

When the stock level of a particular item in outlet has reached its minimum quantity level, user in outlet can request for more goods to HQ.

This request will be sent via the Retail POS system. HQ will receive this request and decide whether to approve the request or not.

Nevertheless, without the stock request, HQ or outlet can also perform stock transfer whenever deemed necessary. Retail POS has the capability to track the movement of the goods (**stock transfer**), and also able to track whether the transfer of the goods has been successful (**stock transfer status**), or there are some discrepancy between the transferred goods and the received goods.

Various reports containing Goods Transfer information are provided within the system

This feature enables user to achieve greater control over the operation of their business.

Analysis / Reports Module

The analysis module gives user the ability to perform various type of analysis towards the operation of their business, namely Sales Analysis, Salesman Analysis, etc.

The reports module provides user with comprehensive information of their business operation. Also, the module allows user to retrieve the information and print out report easily.

Some analysis / reports available are namely:

- Inventory Analysis
- Purchase Analysis
- Sales Analysis
- Daily sales Report by Department
- Daily sales Report by Category

Retail POS

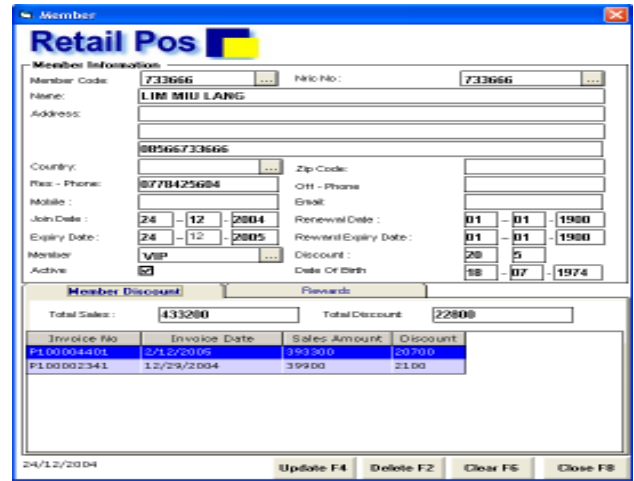

Membership Module

Retail POS Membership module allows user to offer membership program to earn customer loyalty. User can create membership level such as Platinum membership, Gold membership, and Silver membership. Each membership level will be entitled to receive certain rate of discount whenever they shop.

Additionally, using the Retail POS system, user will also be able to give out reward point to customers during special promotional period. The reward point earned by the customer can then be accumulated to redeem certain item.

The Membership module also supports the improvement of customer service by tracking every purchase that had been made by a particular customer. Using this information, user can have the knowledge of WHO buys WHAT and eventually support their marketing strategy.
